

Comparison of Duration of Photosynthetic Activity in the Northwestern United States in 2008 and 2018

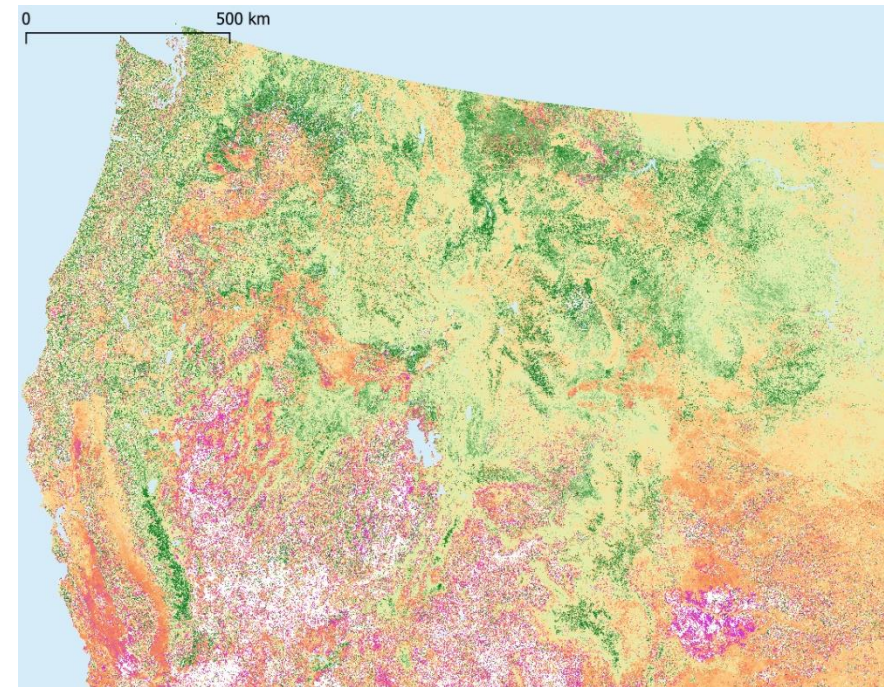

2008

2008

- 90-144 Days
- 145-199 Days
- 200-254 Days
- 255-309 Days
- 310-365 Days
- Water
- No Data

2018

2018

- 90-144 Days
- 145-199 Days
- 200-254 Days
- 255-309 Days
- 310-365 Days
- Water
- No Data

0 500 km

Change in Duration

Positive Change

No Change

Negative Change

Hypothesis: In recent decades we have seen changes in the climate. Warmer weather has led to longer durations of photosynthetic activity. It is possible to see these changes from 2008 to 2018.
